

Crispin Gardiner

Stochastic Methods

A Handbook for the Natural and Social Sciences

Fourth Edition

 Springer

Contents

1. A Historical Introduction	1
1.1 Motivation	1
1.2 Some Historical Examples	2
1.2.1 Brownian Motion	2
1.2.2 Langevin's Equation	6
1.3 The Stock Market	8
1.3.1 Statistics of Returns	8
1.3.2 Financial Derivatives	9
1.3.3 The Black-Scholes Formula	10
1.3.4 Heavy Tailed Distributions	10
1.4 Birth-Death Processes	11
1.5 Noise in Electronic Systems	14
1.5.1 Shot Noise	14
1.5.2 Autocorrelation Functions and Spectra	18
1.5.3 Fourier Analysis of Fluctuating Functions: Stationary Systems	19
1.5.4 Johnson Noise and Nyquist's Theorem	20
2. Probability Concepts	23
2.1 Events, and Sets of Events	23
2.2 Probabilities	24
2.2.1 Probability Axioms	24
2.2.2 The Meaning of $P(A)$	25
2.2.3 The Meaning of the Axioms	25
2.2.4 Random Variables	26
2.3 Joint and Conditional Probabilities: Independence	27
2.3.1 Joint Probabilities	27
2.3.2 Conditional Probabilities	27
2.3.3 Relationship Between Joint Probabilities of Different Orders	28
2.3.4 Independence	28
2.4 Mean Values and Probability Density	29
2.4.1 Determination of Probability Density by Means	
of Arbitrary Functions	30
2.4.2 Sets of Probability Zero	30
2.5 The Interpretation of Mean Values	31
2.5.1 Moments, Correlations, and Covariances	32
2.5.2 The Law of Large Numbers	32
2.6 Characteristic Function	33
2.7 Cumulant Generating Function: Correlation Functions and Cumulants	34
2.7.1 Example: Cumulant of Order 4: $\langle\langle X_1 X_2 X_3 X_4 \rangle\rangle$	36
2.7.2 Significance of Cumulants	36
2.8 Gaussian and Poissonian Probability Distributions	37

2.8.1	The Gaussian Distribution	37
2.8.2	Central Limit Theorem	38
2.8.3	The Poisson Distribution	39
2.9	Limits of Sequences of Random Variables	40
2.9.1	Almost Certain Limit	40
2.9.2	Mean Square Limit (Limit in the Mean)	41
2.9.3	Stochastic Limit, or Limit in Probability	41
2.9.4	Limit in Distribution	41
2.9.5	Relationship Between Limits	41
3.	Markov Processes	42
3.1	Stochastic Processes	42
3.1.1	Kinds of Stochastic Process	42
3.2	Markov Process	43
3.2.1	Consistency—the Chapman-Kolmogorov Equation	44
3.2.2	Discrete State Spaces	44
3.2.3	More General Measures	45
3.3	Continuity in Stochastic Processes	45
3.3.1	Mathematical Definition of a Continuous Markov Process	46
3.4	Differential Chapman-Kolmogorov Equation	47
3.4.1	Derivation of the Differential Chapman-Kolmogorov Equation	48
3.4.2	Status of the Differential Chapman-Kolmogorov Equation	51
3.5	Interpretation of Conditions and Results	51
3.5.1	Jump Processes: The Master Equation	51
3.5.2	Diffusion Processes—the Fokker-Planck Equation	52
3.5.3	Deterministic Processes—Liouville's Equation	54
3.5.4	General Processes	55
3.6	Equations for Time Development in Initial Time—Backward Equations	55
3.7	Stationary and Homogeneous Markov Processes	56
3.7.1	Ergodic Properties	57
3.7.2	Homogeneous Processes	60
3.7.3	Approach to a Stationary Process	60
3.7.4	Autocorrelation Function for Markov Processes	63
3.8	Examples of Markov Processes	65
3.8.1	The Wiener Process	65
3.8.2	The Random Walk in One Dimension	68
3.8.3	Poisson Process	71
3.8.4	The Ornstein-Uhlenbeck Process	72
3.8.5	Random Telegraph Process	75

4. The Ito Calculus and Stochastic Differential Equations	77
4.1 Motivation	77
4.2 Stochastic Integration	79
4.2.1 Definition of the Stochastic Integral	79
4.2.2 Ito Stochastic Integral	81
4.2.3 Example $\int_{t_0}^t W(t')dW(t')$	81
4.2.4 The Stratonovich Integral	82
4.2.5 Nonanticipating Functions	82
4.2.6 Proof that $dW(t)^2 = dt$ and $dW(t)^{2+N} = 0$	83
4.2.7 Properties of the Ito Stochastic Integral	85
4.3 Stochastic Differential Equations (SDE)	88
4.3.1 Ito Stochastic Differential Equation: Definition	89
4.3.2 Dependence on Initial Conditions and Parameters	91
4.3.3 Markov Property of the Solution of an Ito SDE	92
4.3.4 Change of Variables: Ito's Formula	92
4.3.5 Connection Between Fokker-Planck Equation and Stochastic Differential Equation	93
4.3.6 Multivariable Systems	95
4.4 The Stratonovich Stochastic Integral	96
4.4.1 Definition of the Stratonovich Stochastic Integral	96
4.4.2 Stratonovich Stochastic Differential Equation	96
4.5 Some Examples and Solutions	99
4.5.1 Coefficients without x Dependence	99
4.5.2 Multiplicative Linear White Noise Process—Geometric Brownian Motion	100
4.5.3 Complex Oscillator with Noisy Frequency	101
4.5.4 Ornstein-Uhlenbeck Process	103
4.5.5 Conversion from Cartesian to Polar Coordinates	104
4.5.6 Multivariate Ornstein-Uhlenbeck Process	105
4.5.7 The General Single Variable Linear Equation	108
4.5.8 Multivariable Linear Equations	110
4.5.9 Time-Dependent Ornstein-Uhlenbeck Process	111
5. The Fokker-Planck Equation	113
5.1 Probability Current and Boundary Conditions	114
5.1.1 Classification of Boundary Conditions	116
5.1.2 Boundary Conditions for the Backward Fokker- Planck Equation	116
5.2 Fokker-Planck Equation in One Dimension	117
5.2.1 Boundary Conditions in One Dimension	118
5.3 Stationary Solutions for Homogeneous Fokker-Planck Equations ...	120
5.3.1 Examples of Stationary Solutions	122
5.4 Eigenfunction Methods for Homogeneous Processes	124
5.4.1 Eigenfunctions for Reflecting Boundaries	124
5.4.2 Eigenfunctions for Absorbing Boundaries	126

5.4.3	Examples	126
5.5	First Passage Times for Homogeneous Processes	130
5.5.1	Two Absorbing Barriers.....	130
5.5.2	One Absorbing Barrier.....	132
5.5.3	Application—Escape Over a Potential Barrier	133
5.5.4	Probability of Exit Through a Particular End of the Interval .	135
6.	The Fokker-Planck Equation in Several Dimensions	138
6.1	Change of Variables	138
6.2	Stationary Solutions of Many Variable Fokker-Planck Equations ...	140
6.2.1	Boundary Conditions	140
6.2.2	Potential Conditions	141
6.3	Detailed Balance	142
6.3.1	Definition of Detailed Balance	142
6.3.2	Detailed Balance for a Markov Process	143
6.3.3	Consequences of Detailed Balance for Stationary Mean, Autocorrelation Function and Spectrum	144
6.3.4	Situations in Which Detailed Balance must be Generalised .	144
6.3.5	Implementation of Detailed Balance in the Differential Chapman-Kolmogorov Equation	145
6.4	Examples of Detailed Balance in Fokker-Planck Equations	149
6.4.1	Kramers' Equation for Brownian Motion in a Potential	149
6.4.2	Deterministic Motion	152
6.4.3	Detailed Balance in Markovian Physical Systems	153
6.4.4	Ornstein-Uhlenbeck Process	153
6.4.5	The Onsager Relations.....	155
6.4.6	Significance of the Onsager Relations—Fluctuation- Dissipation Theorem	156
6.5	Eigenfunction Methods in Many Variables.....	158
6.5.1	Relationship between Forward and Backward Eigenfunctions	159
6.5.2	Even Variables Only—Negativity of Eigenvalues.....	159
6.5.3	A Variational Principle.....	160
6.5.4	Conditional Probability	161
6.5.5	Autocorrelation Matrix	161
6.5.6	Spectrum Matrix.....	162
6.6	First Exit Time from a Region (Homogeneous Processes)	163
6.6.1	Solutions of Mean Exit Time Problems	164
6.6.2	Distribution of Exit Points	166
7.	Small Noise Approximations for Diffusion Processes	169
7.1	Comparison of Small Noise Expansions for Stochastic Differential Equations and Fokker-Planck Equations.....	169
7.2	Small Noise Expansions for Stochastic Differential Equations	171
7.2.1	Validity of the Expansion	174
7.2.2	Stationary Solutions (Homogeneous Processes).....	175

7.2.3	Mean, Variance, and Time Correlation Function	175
7.2.4	Failure of Small Noise Perturbation Theories	176
7.3	Small Noise Expansion of the Fokker-Planck Equation	178
7.3.1	Equations for Moments and Autocorrelation Functions	180
7.3.2	Example	182
7.3.3	Asymptotic Method for Stationary Distribution	184
8.	The White Noise Limit	185
8.1	White Noise Process as a Limit of Nonwhite Process	185
8.1.1	Formulation of the Limit	186
8.1.2	Generalisations of the Method	189
8.2	Brownian Motion and the Smoluchowski Equation	192
8.2.1	Systematic Formulation in Terms of Operators and Projectors	194
8.2.2	Short-Time Behaviour	195
8.2.3	Boundary Conditions	197
8.2.4	Evaluation of Higher Order Corrections	198
8.3	Adiabatic Elimination of Fast Variables: The General Case	202
8.3.1	Example: Elimination of Short-Lived Chemical Intermediates	202
8.3.2	Adiabatic Elimination in Haken's Model	206
8.3.3	Adiabatic Elimination of Fast Variables: A Nonlinear Case	210
8.3.4	An Example with Arbitrary Nonlinear Coupling	214
9.	Beyond the White Noise Limit	216
9.1	Specification of the Problem	217
9.1.1	Eigenfunctions of L_1	218
9.1.2	Projectors	218
9.2	Bloch's Perturbation Theory	219
9.2.1	Formalism for the Perturbation Theory	220
9.2.2	Application of Bloch's Perturbation Theory	222
9.2.3	Construction of the Conditional Probability	223
9.2.4	Stationary Solution $P_s(x, p)$	226
9.2.5	Examples	226
9.2.6	Generalisation to a system driven by several Markov Processes	228
9.3	Computation of Correlation Functions	230
9.3.1	Special Results for Ornstein-Uhlenbeck $p(t)$	232
9.3.2	Generalisation to Arbitrary Gaussian Inputs	232
9.4	The White Noise Limit	233
9.4.1	Relation of the White Noise Limit of $\langle x(t)\xi(0) \rangle$ to the Impulse Response Function	233
10.	Lévy Processes and Financial Applications	235
10.1	Stochastic Description of Stock Prices	235
10.2	The Brownian Motion Description of Financial Markets	237
10.2.1	Financial Assets	237

10.2.2	“Long” and “Short” Positions	238
10.2.3	Perfect Liquidity	238
10.2.4	The Black-Scholes Formula	238
10.2.5	Explicit Solution for the Option Price	240
10.2.6	Analysis of the Formula	242
10.2.7	The Risk-Neutral Formulation	244
10.2.8	Change of Measure and Girsanov’s Theorem	245
10.3	Heavy Tails and Lévy Processes	248
10.3.1	Lévy Processes	248
10.3.2	Infinite Divisibility	249
10.3.3	The Poisson Process	250
10.3.4	The Compound Poisson Process	250
10.3.5	Lévy Processes with Infinite Intensity	251
10.3.6	The Lévy-Khinchin Formula	252
10.4	The Paretian Processes	252
10.4.1	Shapes of the Paretian Distributions	255
10.4.2	The Events of a Paretian Process	255
10.4.3	Stable Processes	257
10.4.4	Other Lévy processes	258
10.5	Modelling the Empirical Behaviour of Financial Markets	258
10.5.1	Stylised Statistical Facts on Asset Returns	258
10.5.2	The Paretian Process Description	259
10.5.3	Implications for Realistic Models	259
10.5.4	Equivalent Martingale Measure	260
10.5.5	Hyperbolic Models	262
10.5.6	Choice of Models	262
10.6	Epilogue—the Crash of 2008	263
11.	Master Equations and Jump Processes	264
11.1	Birth-Death Master Equations—One Variable	264
11.1.1	Stationary Solutions	265
11.1.2	Example: Chemical Reaction $X \rightleftharpoons A$	267
11.1.3	A Chemical Bistable System	269
11.2	Approximation of Master Equations by Fokker-Planck Equations	273
11.2.1	Jump Process Approximation of a Diffusion Process	273
11.2.2	The Kramers-Moyal Expansion	275
11.2.3	Van Kampen’s System Size Expansion	276
11.2.4	Kurtz’s Theorem	280
11.2.5	Critical Fluctuations	281
11.3	Boundary Conditions for Birth-Death Processes	283
11.4	Mean First Passage Times	284
11.4.1	Probability of Absorption	286
11.4.2	Comparison with Fokker-Planck Equation	286
11.5	Birth-Death Systems with Many Variables	287
11.5.1	Stationary Solutions when Detailed Balance Holds	288

11.5.2	Stationary Solutions Without Detailed Balance (Kirchoff's Solution)	290
11.5.3	System Size Expansion and Related Expansions	291
11.6	Some Examples	291
11.6.1	$X + A \xrightleftharpoons[k]{y} 2X$	291
11.6.2	$X \xrightleftharpoons[k]{y} Y \xrightleftharpoons[k]{y} A$	292
11.6.3	Prey-Predator System	292
11.6.4	Generating Function Equations	297
12.	The Poisson Representation	301
12.1	Formulation of the Poisson Representation	301
12.2	Kinds of Poisson Representations	305
12.2.1	Real Poisson Representations	305
12.2.2	Complex Poisson Representations	306
12.2.3	The Positive Poisson Representation	309
12.3	Time Correlation Functions	313
12.3.1	Interpretation in Terms of Statistical Mechanics	314
12.3.2	Linearised Results	318
12.4	Trimolecular Reaction	318
12.4.1	Fokker-Planck Equation for Trimolecular Reaction	319
12.4.2	Third-Order Noise	323
12.4.3	Example of the Use of Third-Order Noise	324
12.5	Simulations Using the Positive Poisson representation	326
12.5.1	Analytic Treatment via the Deterministic Equation	326
12.5.2	Full Stochastic Case	329
12.5.3	Testing the Validity of Positive Poisson Simulations	331
12.6	Application of the Poisson Representation to Population Dynamics	332
12.6.1	The Logistic Model	332
12.6.2	Poisson Representation Stochastic Differential Equation	333
12.6.3	Environmental Noise	333
12.6.4	Extinction	334
13.	Spatially Distributed Systems	336
13.1	Background	336
13.1.1	Functional Fokker-Planck Equations	338
13.2	Multivariate Master Equation Description	339
13.2.1	Continuum Form of Diffusion Master Equation	341
13.2.2	Combining Reactions and Diffusion	345
13.2.3	Poisson Representation Methods	346
13.3	Spatial and Temporal Correlation Structures	347
13.3.1	Reaction $X \xrightleftharpoons[k_2]{k_1} Y$	347
13.3.2	Reactions $B + X \xrightleftharpoons[k_3]{k_1} C, \quad A + X \xrightarrow[k_2]{} 2X$	350
13.3.3	A Nonlinear Model with a Second-Order Phase Transition ..	355

13.4	Connection Between Local and Global Descriptions	359
13.4.1	Explicit Adiabatic Elimination of Inhomogeneous Modes	360
13.5	Phase-Space Master Equation	362
13.5.1	Treatment of Flow	362
13.5.2	Flow as a Birth-Death Process	363
13.5.3	Inclusion of Collisions—the Boltzmann Master Equation	366
13.5.4	Collisions and Flow Together	369
14.	Bistability, Metastability, and Escape Problems	372
14.1	Diffusion in a Double-Well Potential (One Variable)	372
14.1.1	Behaviour for $D = 0$	373
14.1.2	Behaviour if D^{\dagger} is Very Small	373
14.1.3	Exit Time	375
14.1.4	Splitting Probability	375
14.1.5	Decay from an Unstable State	377
14.2	Equilibration of Populations in Each Well	378
14.2.1	Kramers' Method	378
14.2.2	Example: Reversible Denaturation of Chymotrypsinogen	382
14.2.3	Bistability with Birth-Death Master Equations (One Variable)	384
14.3	Bistability in Multivariable Systems	386
14.3.1	Distribution of Exit Points	387
14.3.2	Asymptotic Analysis of Mean Exit Time	391
14.3.3	Kramers' Method in Several Dimensions	392
14.3.4	Example: Brownian Motion in a Double Potential	394
15.	Simulation of Stochastic Differential Equations	401
15.1	The One Variable Taylor Expansion	402
15.1.1	Euler-Methods	402
15.1.2	Higher Orders	402
15.1.3	Multiple Stochastic Integrals	403
15.1.4	The Euler Algorithm	404
15.1.5	Milstein Algorithm	406
15.2	The Meaning of Weak and Strong Convergence	407
15.3	Stability	407
15.3.1	Consistency	410
15.4	Implicit and Semi-implicit Algorithms	410
15.5	Vector Stochastic Differential Equations	411
15.5.1	Formulae and Notation	412
15.5.2	Multiple Stochastic Integrals	412
15.5.3	The Vector Euler Algorithm	414
15.5.4	The Vector Milstein Algorithm	414
15.5.5	The Strong Vector Semi-implicit Algorithm	415
15.5.6	The Weak Vector Semi-implicit Algorithm	415
15.6	Higher Order Algorithms	416
15.7	Stochastic Partial Differential Equations	417

15.7.1 Fourier Transform Methods.....	418
15.7.2 The Interaction Picture Method	419
15.8 Software Resources.....	420
References	421
Bibliography	429
Author Index	434
Symbol Index	435
Subject Index	439
